A = Arrestees S = Suspects CO = Convicted offenders T = Totals (or when no distinction can be made)

When using these data one should realize that:

There are countries that add more than one DNA-profile of a person to their DNA-database

There are countries that add more than one unique DNA-profile of a stain per crime scene to their DNA-database

Counties use different removal regimes for DNA-profiles of stains: never or immediately after a match with a person or after the authorities have dealt with the match with the person
