A = Arrestees S = Suspects CO = Convicted offenders T = Totals (or when no distinction can be made)

When using these data one should realize that:

# There are countries that add more than one DNA-profile of a person to their DNA-database

# There are countries that add more than one unique DNA-profile of a stain per crime scene to their DNA-database

# Countries use different removal regimes for DNA-profiles of stains: never or immediately after a match with a person or after the authorities have dealt with the match with the person

# Countries use different removal regimes for DNA-profiles of persons: After some storage time and/or if a person is not prosecuted or convicted

# Stain-to-person matches can be so-called "cold hits" (matches for which no suspect was known) or matches where both a stain and a suspect were added to the DNA-database
